COWORKING SPACES*

THE CONCEPTS OF FUTURE PROJECTS IN THESE CATEGORIES ARE ALSO ACCEPTED, WHICH WILL BE EVALUATED WITHIN THE FRAMEWORK OF A SEPARATE NOMINATION

EXHIBITION STANDS

A GREAT OPPORTUNITY FOR CONGRESS PARTICIPANTS TO DEMONSTRATE THEIR PRODUCTS AND ESTABLISH A LARGE AMOUNT OF USEFUL CONTACTS. EACH OF THE PROPOSED FORMATS HAS ITS OWN ADVANTAGES:

COLLABOOTH

This format is aimed at creating a presentable and memorable exhibition stand that will attract the attention of Congress participants. The booth space is united by a single idea, which can be expressed in various ways, from a manifesto to a color scheme. CollaBooth helps you to take a non-standard approach to demonstrating your advantages and stand out from the competition.

DISPLAY STAND

This format is suitable for those who want to exhibit their product or service in the most complete and detailed way. The participant has the opportunity to independently organize their stand and place all the necessary equipment on it, drawing the attention of the professional community to their product.

THE HEADLINERS OF ARCHICA 2023

G4 CITY

An ambitious and long-awaited construction and urban planning project aimed at **creating four structurally combined modern smart cities** located along the republican highway Almaty – Ust-Kamenogorsk at the section of Almaty – Kapshagay.

The construction is carried out with support of **government-private partnership (GPP)**. For the past eight years since the launch, the developers have come together to achieve great progress on laying the foundation for the four cities.

TASHKENT NEW CITY

Spearheaded by the international architectural bureau Benoy, this project seeks to design **a masterplan vision for a new capital city of Uzbekistan** on a vast expanse of land of 20,000 hectares immediately east of the existing city of Tashkent.

The new city will include a new **Airport City, Trade District, CBD, and Administrative District** covering an area of 300 hectares, which will stand as the first phase of the development.

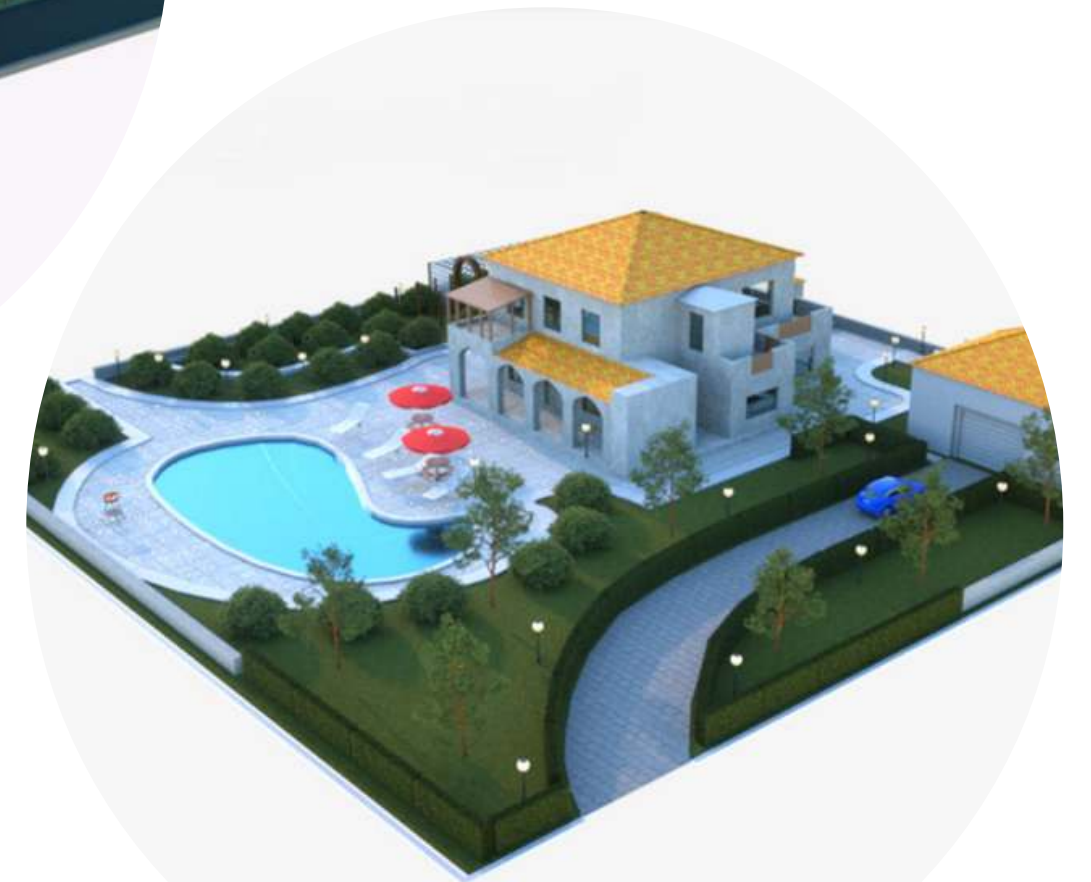

ECOPOLIS ON SAKHALIN

The main aim of this project is to develop **a research and sustainability hub** while conserving the **fragile ecosystem** of Sakhalin Island.

The Masterplan for the new Ecopolis, developed by IND architects, takes into account the importance of preserving the unique features of the place, while weaving the territory into the global agenda and incorporating it into global processes.
