

SLOVAK **TOP** picks 2022

Welcome to SLOVAKIA.

SLOVAKIA is situated in the geographical center of Europe and is accessible from all key European economic hubs. As a fully integrated EU member, Slovakia is a part of its internal market, which means that around 500 million EU citizens can be easily accessed.

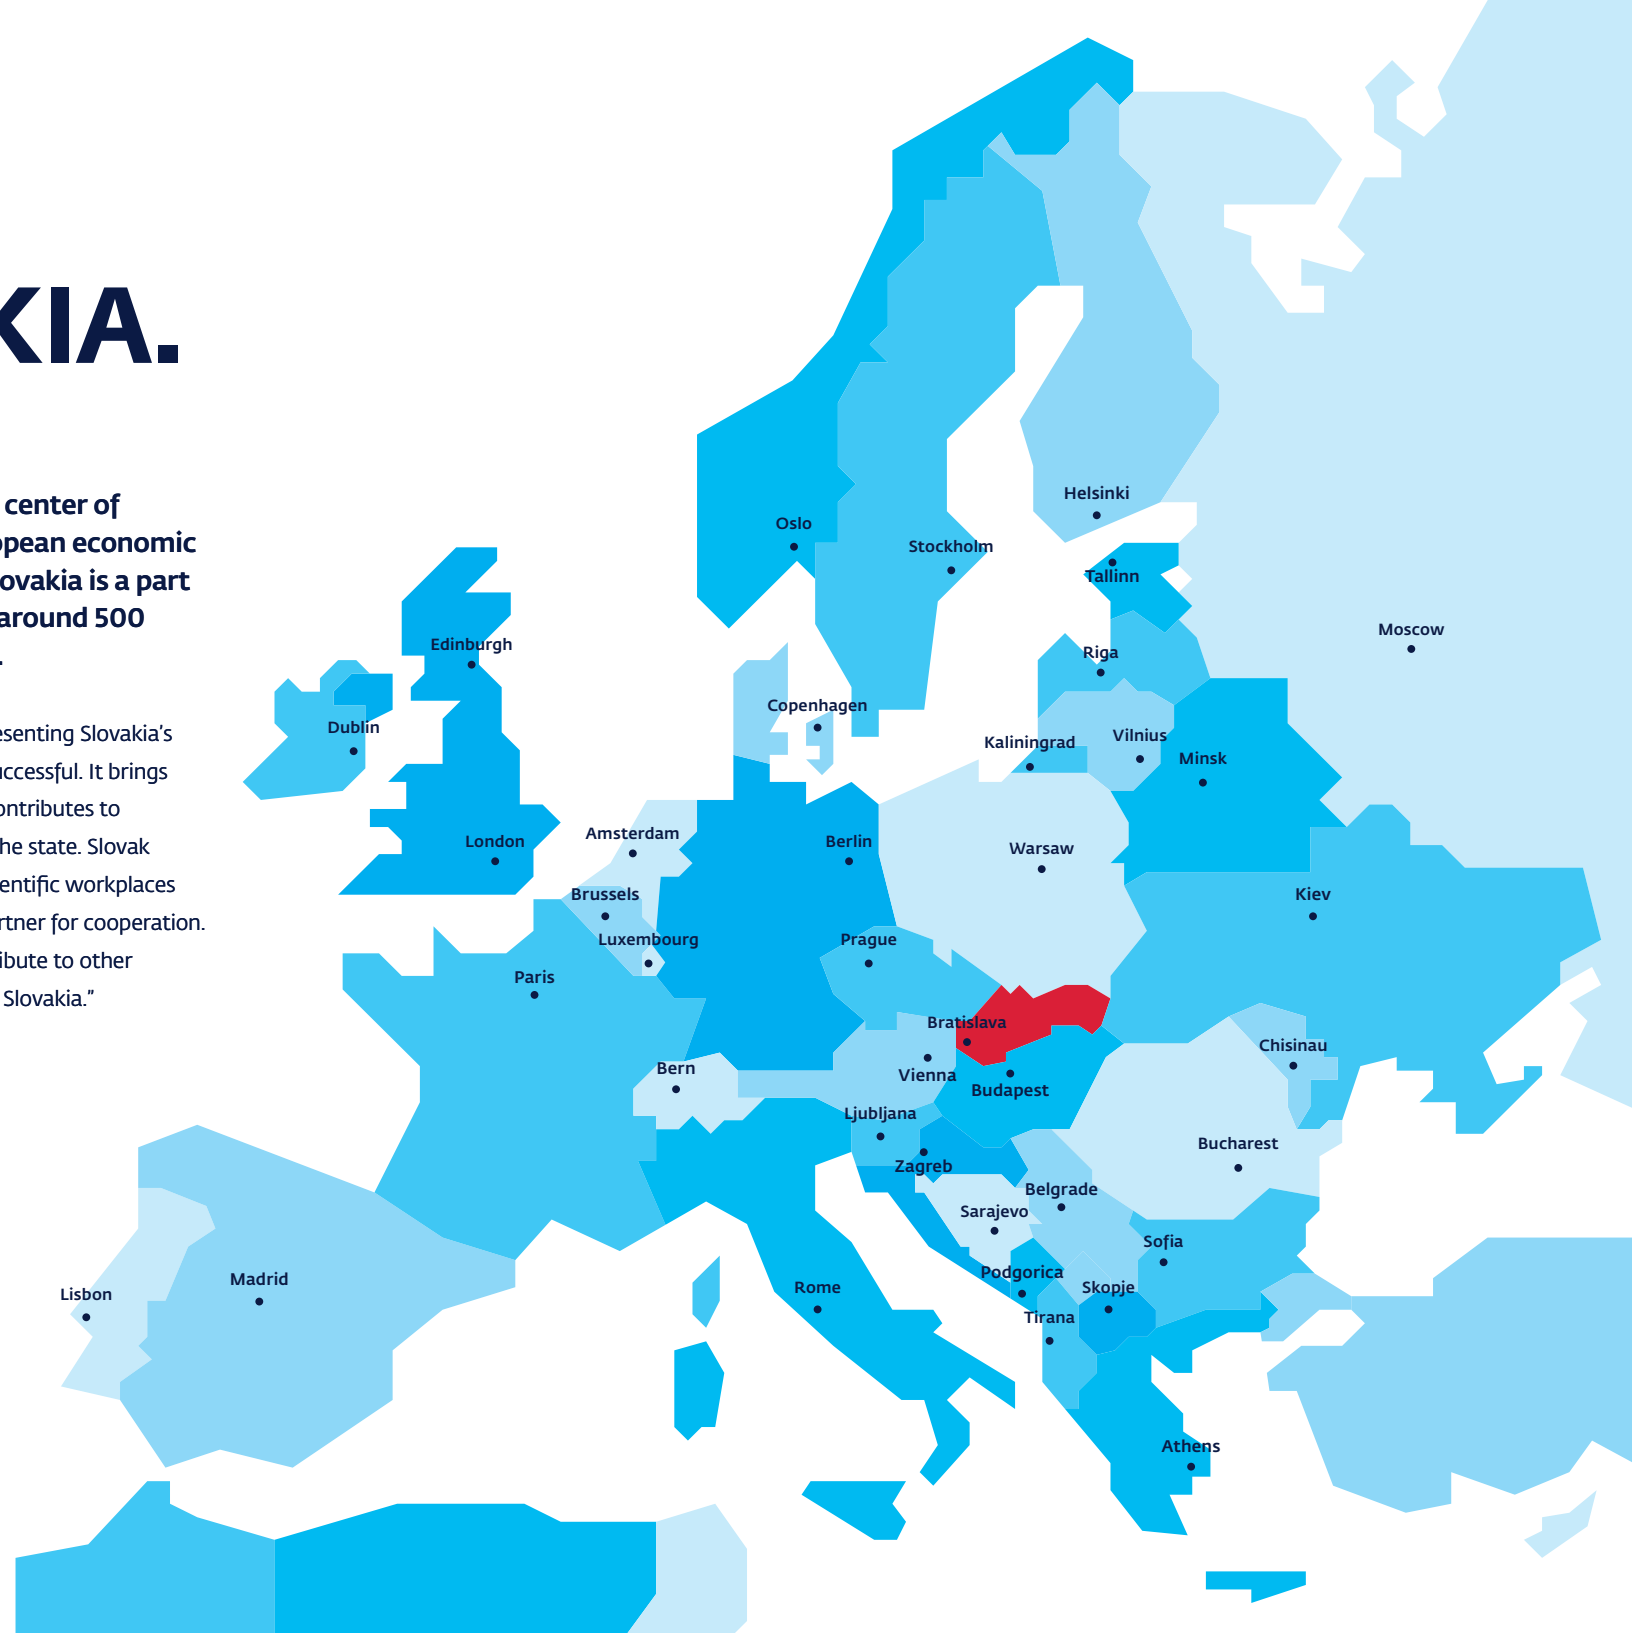

"At SARIO, a proactive and systematic approach to presenting Slovakia's investment and business potential has proven to be successful. It brings concrete results for the country, our companies and contributes to the continuous improvement of services provided by the state. Slovak companies, research and development centers and scientific workplaces are globally competitive and perceived as a reliable partner for cooperation. I believe that this presentation material will also contribute to other successful Slovak stories abroad and to the visibility of Slovakia."

SARIO CEO, Robert Simonic

TOTAL AREA 49,035 km²
POPULATION 5.4 million

SLOVAK TOP Picks 2022

Continually Improving Business Environment

There are several recent activities and measures introduced by the Slovak government to increase the quality of the Slovak business & investment environment.

2013
Introduction of RIS3 smart national R&D strategy

2015
Introduction of R&D related tax regime — R&D superdeduction

2015
Launch of official dual education system

2017
Decreased corporate income tax rate to 21%

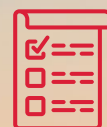

2018
New attractive investment incentives scheme

2019
Electricity price discount for energy-intensive manufacturers

2020
Increase of R&D tax deduction

2021
Introduction of '1 year — 1 set of rules principle' — new legislation on taxes & social contributions always enters into force by January 1

2022
Introduction of Kurzarbeit — Mechanism for ensuring retention of jobs during the crisis

SLOVAKIA is experiencing an ongoing economic expansion, driven by continually increasing domestic demand, as well as booming investments – domestic and foreign. Generally, since 2010 Slovak economy has been growing faster than EU average and is expected to achieve one of the highest growth rates also in nearest future.

SLOVAKIA has euro currency as one of the few in CEE, which contributes to its macroeconomic stability

Slovak economy has been growing also in the terms of quality. Between 2010 and 2020 **SLOVAKIA** experienced the highest average growth of added value in the industrial production in the CEE.

REAL GDP GROWTH (%)

*All EU countries experienced negative growth in 2020 due to global pandemic. Sources: GDP Growth Data: European Commission, European Economic Forecast Summer 2021; Credit Ratings Data: S&P, Moody's, Fitch, OECD (2021); Indebtedness Data: Eurostat (2020); Economy Openness Data: International Monetary Fund (2022); Improving Business Environment: SARIO (2021)

The Most Open Economy in the EU

EXPORT (% OF GDP)

1ST PLACE IN EU

76.3%

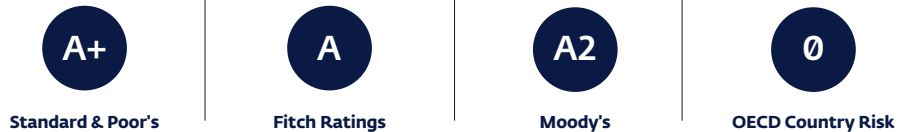

EXPORT OF GOODS

4TH PLACE IN EU

85.7%

EXPORT OF GOODS & SERVICES

COUNTRY CREDIT RATINGS

The World Bank Ranking

Nº 1

SLOVAKIA ranks as no. 1 globally in Ease Of Trading Across Borders reflecting the time and cost associated with the logistical process of exporting/importing goods.

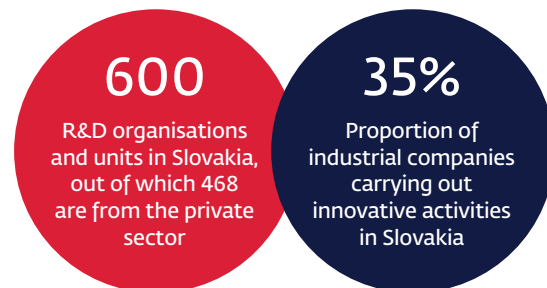

International Chamber of Commerce Ranking

Nº 12

SLOVAKIA ranks as no. 12 in the world in the Open Markets Index assessing openness to trade, trade policy settings, FDI openness and trade-enabling infrastructure.

R&D & Innovation Sector in Slovakia

Despite being viewed as a production powerhouse, Slovakia sees its future mainly in high value-added projects and investments, especially in R&D and innovative operations. The World Economic Forum ranks Slovakia 1st in the CEE region and 1st in The World on FDI and Technology Transfer. Slovak R&D has a long tradition, great network as well as capability of delivering internationally renowned cutting-edge solutions required in today's modern era.

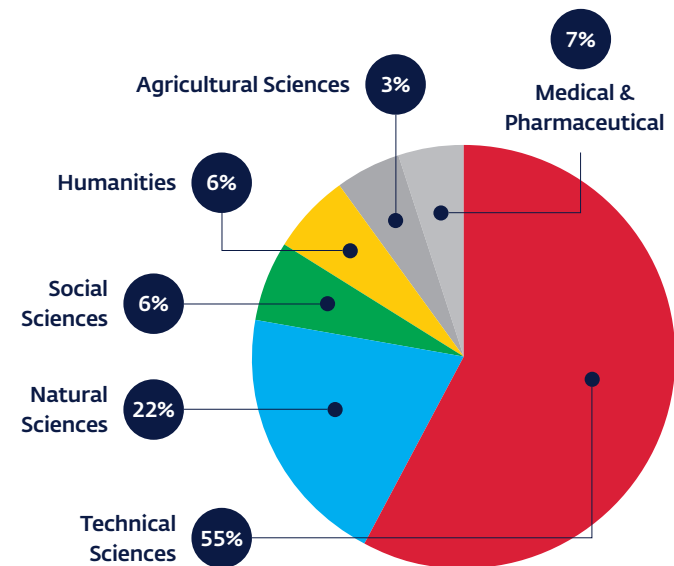

Top 5 Reasons to Establish an R&D Centre in Slovakia

- 1** Additional 100% tax deduction for R&D expenses
- 2** Attractive investment incentives for R&D and technology centres
- 3** Special tax regime for intellectual property revenues (patent box)
- 4** Stable economic & political environment with Euro currency
- 5** Qualified & cost-effective human resources

Ivanka pri Nitre

LYRA MANDALA

KEY FEATURES

- bean to bar chocolate

Why does our chocolate boast an exceptional aroma and taste? Because, to produce it, we use Fino de Aroma cocoa beans which are the best the world's plantations have to offer. They represent only five percent of global production and require far more hard manual work from small farmers than large-scale mechanized farms.

HS CODE

1806 - Chocolate and other food preparations containing cocoa

LYRA

COMPANY PROFILE

The KOLATCH brand was created out of the desire to share a one-of-a-kind taste experience with the general public. An experience for which we like to take our time. "Time for dessert." In this regard, we are a confectionery company in every sense. Our mission is to create an imaginary bridge between convention and innovation, where the used raw material is exceeding the product as a whole.

Our factory is located in Slovakia, from where we service the whole world. We sell our products under the KOLATCH brand, but we also provide the production of private labels in the HCCP and IFS FOOD standards. Custom recipe in BIO quality is also available.

SECTOR/SPECIFICATION

Agriculture/Food

PRODUCT PORTFOLIO

**KEY FEATURES**

- **Addiction and love hidden in the Tube**

We are specialists in the production of desserts in tubes. TUBA is product line of premium nut dessert creams intended for direct consumption. Product TUBA consist of enhanced traditional confectionery, for which we use premium quality raw materials and innovative processing technologies. The product consists of ingrediencies with high nutritional values. TUBA dessert has own 8 flavours – Salty caramel, Cappuccino, Chocolate and coconut, Hazelnut, Pistachio, Almond and cinnamon, Strawberry and White choco in BIO quality. From 2022 we have new product line of PROTEIN TUBA in 3 flavours with the 25% of protein portion. All recipes and flavours are developed by our technologist and produced with new and innovative processing technologies.

**KEY FEATURES**

- aminoacid organic liquid fertilizer

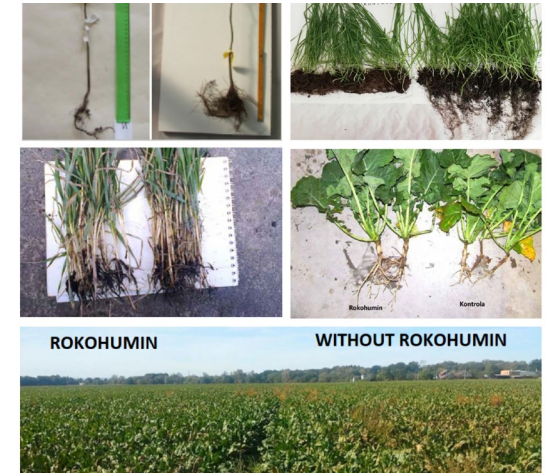

ROKOHUMIN - Liquid amino acid fertiliser containing amino acids, peptides, humic acids, macro and micronutrients for foliar application. Product stimulating of growth, promoting nutrient intake, increasing the resistance of plants to fluctuations in weather. The advantage of foliar nutrition is the provision of a sufficient nutrient variety of living plants. Our fertilizers are more efficient and cost effective than their chemical counterparts, while preserving natural fertility of soil. Best results can be achieved by combination of ROKOHUMIN, ROKOLAN and ROKOAKTIV. By using our complete technology you can completely replace UREA and DAP requirements of farmers.

Tatratea 52% Original

KEY FEATURES

- local
- diversified
- natural ingredients

Tatratea 52% originates from legendary High Tatra Mountain cabins that continue to serve this popular drink to true adventure seekers. Initially, it is a concentrate of exceptional purified grain alcohol, first-class black tea, natural extracts from herbs, fruit extracts, distillates, sugar and pure water from the Tatra Mountains. Before the finished product reaches its consumers, the tea and herb extract is aged in oak barrels, followed by an extraction and filtration process. Afterwards, the maturing process takes 8 weeks and alcohol is made from molasses. When matured, the drink is left to rest and then it's filled into the bottles.

TRENS SK, a.s.

COMPANY PROFILE

TRENS SK is a major global manufacturer and provider of advanced and high-precision machine tool solutions. TRENS has been developing and manufacturing machine tools in the city of Trenčín, in the Slovak Republic, for more than 80 years. It supplies both stand-alone machines and complete turnkey production solutions. The company specializes in producing CNC turning centers, CNC universal center lathes, universal center lathes, spare parts, and accessories.

SECTOR/SPECIFICATION

Engineering industry/ Producer of machine tools – lathes

SBX 500 DoubleTurn M.C.Y.

KEY FEATURES

- High productivity turning center of a rigid design suitable for medium to large production of simple as well as complex geometrical shapes

Machine execution with Y-axis and live tools allows machining of complex shape workpieces on a single machine which significantly reduces production time and increases workpiece accuracy. Machine seriously contributes to increased productivity while decreasing investment costs. Main characteristic features:

Modular conception allows configuring the machine for a wide range of technologies and materials.

Counter spindle with passing hole clamping allows complete machining.

Y-axis with saddle wedge contributes to increased stability of a cutting process.

Fast turret with 12 live tools size VDI 40.

C-axes with independent servomotors for achieving precise and stable workpiece position during cutting forces loading.

HS CODE

8458 - Lathes (including turning centres) for removing metal

REFERENCES/CUSTOMERS

95% of production is exported and TRENS machines can be found in more than 80 countries around the world. Company is exporting products to more than 80 countries around the world: All EU countries, other European countries, Asian countries: China, India, Indonesia, Vietnam. African countries – Algeria, Kenya, Morocco, Middle East Countries – Kingdom of Saudi Arabia, Syria, North and South. America – Canada, USA, Mexico, Columbia, Chile, Ecuador, Venezuela

**KEY FEATURES**

- patented automatic powerful blaster

The professional PLC controlled dry ice blaster IC 430 AUTOMATIC is designed to give the user complete control. The new patented pellet grinding system allows variable output fraction, that can remove dirt from highly sensitive surfaces. IC 430 AUTOMATIC is the highest performing dry ice blaster available, which allows user to clean faster and with greater power.

With a 7" LCD screen and digital controls, the IC 430 AUTOMATIC provides an intuitive display that allows the user to easily view and adjust blasting parameters and machine settings. The high variability of the device settings in combination with a wide portfolio of nozzles, Patented High-Efficiency Flow Initiation Regulator, Ethernet connection, Measuring the amount of granulate in the hopper and Regulation of process parameters through the new IG-40 gun provides a significant competitive advantage. IC 430 AUTOMATIC is ready for connection to robotic workplaces or PLC systems.

COMPANY PROFILE

For many years, TOMARK, s.r.o. has been operating successfully in the demanding and highly competitive environment of the mechanical engineering industry; it specialises in manufacturing in particular for the automotive and aviation industries. In TomarkAero division, specialised in aviation, the company is involved in the manufacture of the all-metal two-seater sports aircraft Viper SD4 and Skyper GT9. The aeroplanes are excellent solution for travel, pilot training and relax. Ideal for lovers of flying and for enthusiasts of modern design.

Viper SD4

KEY FEATURES

- Viper SD4, all-metal sport aircraft, EASA certified, Viper SD4 RTC and Night-VFR

Viper SD4 is an all-metal two-seater aircraft in the UL / LSA / CS-LSA categories, ideal for travel, flight training, sport flying and towing of gliders. Viper SD4 is a perfect combination of excellent design, unique comfort, excellent flight characteristics and a wide offer of state-of-the-art equipment. That's why Viper has become a popular tool for experienced and starting pilots, flight schools as well as flying fans and admirers of beautiful design. Rich equipment is completed by electric flaps, electric trim - elevator, aileron, autopilot, ballistic recovery system (AEPS). Viper SD4 RTC was the first airplane made Slovakia with a type certificate from EASA. Model Viper SD4 Night-VFR is certified for and capable of VFR Night flights.

COMPANY PROFILE

SPINEA®, s.r.o. is a modern Slovak engineering company with a 25-year history, which is engaged in the development, production and sale of high-precision reduction gears TwinSpin® and high-precision actuators DriveSpin®. The company's products are suitable for applications requiring high reduction ratio, high kinematic accuracy, backlash-free operation, high torque, high stiffness, compact design in limited installation space, and lightweight. They find wide applications in automation and industrial robotics, machine tool manufacturing, navigation and vision equipment, medical systems, and many other fields.

SECTOR/SPECIFICATION

Engineering industry

High precision gearbox TwinSpin® and actuators DriveSpin®

KEY FEATURES

- zero-backlash
- high precision
- compactness

The high-precision gearboxes TwinSpin® are based on a reduction mechanism and a new design solution for the radial-axial output bearing. It represents a new generation of systems for the transfer of energy. The term "TwinSpin" indicates the full integration of a very high precision trochoidal gear with a radial-axial bearing in a single unit. This new transmission concept allows the use of high precision TS reduction gears in the joints of robots, rotary tables, and in handling or transport systems. The high precision reduction gears are designed for applications that require a high reduction ratio, high kinematic precision, low lost motion, high moment capacity, and high stiffness of a compact structure in limited installation space, as well as low weight.

HS CODE

TwinSpin® - 8501 - Electric motors and generators (excluding generating sets), DriveSpin®-8483 - Transmission shafts and cranks; bearing housings and plain shaft bearings; gears and gearing; ball or roller screws; gear boxes and other speed changers, including torque converters; flywheels and pulleys, including pulley blocks; clutches and shaft couplings

COMPANY PROFILE

Since its foundation, the company Pewas has offered portfolio of products as footwear and leather care, biodegradable lubricants and fireplace chemistry. Pewas products have been characterized by high quality and their environmental friendliness. These values of the founders echos to the present. Since 2004, the company has expanded its activities and launched research in the field of superabsorbent polymers and their alternative uses in agriculture and other industries. Pewas has developed products and prototypes include flood bags filled with superabsorbents, a hydrogel-based extinguishing agent, 3D sorbent of oil pollution, biodegradable oils and agricultural products of Aquaholder line.

Slovenská Republika

**Aquaholder****KEY FEATURES**

- Aquaholder Seed-Drought relief seed coating-Increased agricultural productivity- Food Safety and Security

Aquaholder Seed

Aquaholder Seed is our highly innovative product with a global potential that has been developed for a seed industry. A small amount of superabsorbent polymer applied directly to the seed is effectively able to bind a sufficient amount of water and to support the growth of the plants in the initial phase of their development. As a result, a significant increase of the seed emergence is achieved. Pewas Aquaholder Seed is primarily designed for an arid and semi-arid areas.

Aquaholder Agro

Aquaholder Agro is a crystal form substance designed for application directly into the soil before or during sowing or planting process. Here it acts as a soil conditioner which improves soil characteristics, water retention and water management allowing the plant to use additional water which would otherwise be unusable for vegetation.

Ecocapsule

COMPANY PROFILE

Ecocapsule® is smart, self-sustainable micro-unit, which utilizes solar and wind energy. It allows you to stay in remote places out of reach of infrastructure, with the luxury of a hotel room. Ecocapsule® is your design way to independent living. It can become a cottage, pop-up hotel, mobile office, research station or anything you want it to be. We have engineered the product from scratch to be as self-sufficient, practical and functional as possible. Join us and change the world - starting with yours!

Ecocapsule

KEY FEATURES

- self-sustainable
- mobile micro-home

Ecocapsule comes with standard equipment such as kitchenette with sink and cooker, pull-out double bed, shower unit with compostable toilet, folding table and lot of storage space.

The installed solar power is 880W. Low-noise wind turbine is delivering up to 750W during day and night. The excess energy is stored in high capacity batteries. Rainwater is collected on the surface, where it's collected to water tank and filtered for your convenience.

COMPANY PROFILE

SEC Technologies is a company with roots in Military Research Institute but works today within all domains of chemical detection. Our core team is working on chemical and biological stand-off and long-range detection for over 30 years and for the whole time we are in touch with the end users. From CBRN military units, firefighters, oil & gas and heavy industries, coast guards to environmentalist.

SECTOR/SPECIFICATION

**KEY FEATURES**

active stand-off detection of CWA's, TIC's

Falcon 4G is 4th generation of laser-based CBRN stand-off detectors, that can detect, identify and quantify chemical warfare agents and toxic industrial chemicals using absorption of laser radiation caused by molecules of agents and biological warfare agents by evaluating particle size using DISC technology.

Main attributes:

- Active laser technology- 2 lasers
- Battle field proven
- Long detection range
- No calibration needed

With Falcon 4G is possible to visualize cloud in 3D image without necessity to have two or three detectors aligned for triangulation. With consumption bellow 25W it becomes reliable partner working tirelessly for the whole day on the battery. Very important as Falcon 4G will be the only stand-off detector that will see the secondary cloud. Long time after it became invisible for all other systems due to the loss of its temperature difference in the environment. Based on pulsed - low energy lasers Falcon 4G is undetectable on the battlefield.

COMPANY PROFILE

insar.sk s.r.o. is a provider of geodetic and remote sensing analysis with a focus on deformation monitoring via satellite radar interferometry (InSAR). The company focuses on the development of autonomous procedures designed to provide continuous infrastructure monitoring for precise engineering tasks. The company is a provider of geodetic-grade quality InSAR analysis from the full range of satellite SAR sensors and terrestrial tools (artificial corner reflectors) with extensive experience in other monitoring techniques, which the team commonly integrates and cross-validates with InSAR measurements.

InSAR Deformation Monitoring

KEY FEATURES

- monitor displacements
- evaluate potential threats

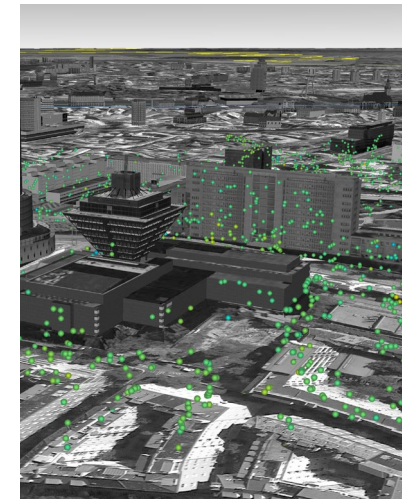

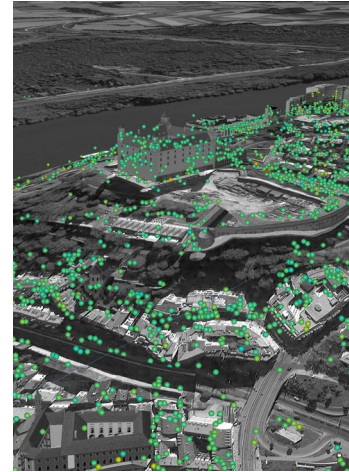

remotIO system provides continuous structural monitoring checks and ensures immediate awareness during deformation processes like landslides or structural collapses. remotIO monitors millimetric changes of man-made objects from Space. The system uses satellite data in order to provide displacement measurements with millimetre precision over entire cities with frequent revisit periods (days to hours) and backdating capability. remotIO provides easy web-access to early warning products which are updated several hours after new satellite acquisition is made. Each new satellite acquisition helps customers to improve their situational awareness over infrastructure assets. As an award-winning and scientifically backed product, the system has been developed under cooperation with European Space Agency.

NG Aviation

COMPANY PROFILE

NG Aviation established itself in digital aeronautical data management and further data use, within the top of what the industry offers. Established in 2016, NG Aviation focuses on bringing digital solutions into aeronautical information management, covering all aspects of aeronautical information from upper airspaces to the airport's last lights in a single digital interface. Its digital platform brings revolutionary geo-referenced visualization of current static and analogue based information into real-time digital data to be used by various aviation stakeholders such as airports, air navigation providers, civil aviation authorities, airlines in both civil and military aviation.

The company transforms the way aeronautical information is managed and shared among all critical partners to improve information flow.

Sensoneo

COMPANY PROFILE

Sensoneo is a global enterprise-grade smart waste management solutions provider that enables cities, businesses, and countries to manage their waste efficiently, lower their environmental footprint, and improve the quality of services supporting the digital transformation of waste management to achieve efficiency, transparency, and sustainability.

Sensoneo is redefining the way waste is managed. Through its unique smart waste management technology, Sensoneo helps to cope with the biggest challenges in today's world of waste management – lack of efficiency and transparency. As an outcome, the solution enables the customers to achieve a 30 – 63% reduction of waste collection routes and 97% accuracy on actual waste production.

Single Sensor 5.0

KEY FEATURES

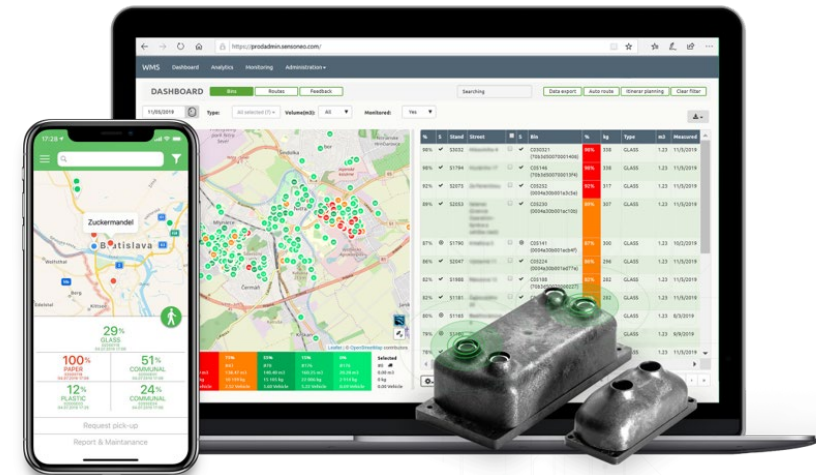

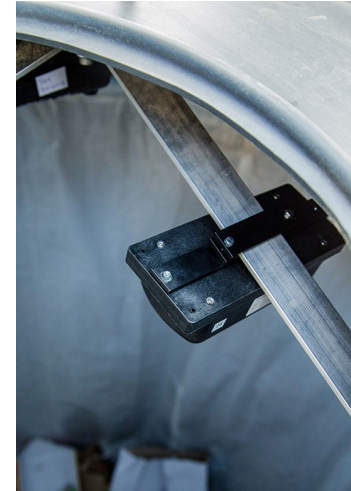

- Firmware Over The Air, GPS powered by GNSS, Measuring range up to 12 metres, IP 69 casing from recyclable polyimide optical fiber

Sensoneo Smart Sensors are designed, developed and produced inhouse (made in EU). The sensors are robust, water and shock resistant, fully functional within wide temperature range, and are set to measure from 3 cm up to 12 m.

The sensors can monitor any type of waste – including liquids – of bins of various types and sizes. The casing is made from recyclable polyimide optical fibers that provide not only an eco-design, but also help with recycling. Sensors have various mounting options, for example with help of screws, clench or rails. Wireless configuration works with Mobile App via BLE or Downlink. The sensors use ultrasonic technology to measure fill levels in bins and containers in frequency adjustable according to preferences (range from once a day to every 2 minutes and to every 1 minute within V5 sensor which includes also the ability to set a specific time).

brAln by FUERGY

KEY FEATURES

- Smart
- Modular
- Autonomous
- Predictive

Smart battery storage system brAln does more than just store the excess green energy. It analyzes a wide range of historical, online data and AI-powered forecasts, such as weather forecasts, deviations in the power grid, delivery point's electricity consumption, electricity prices or local energy production, and autonomously charges and discharges the batteries.

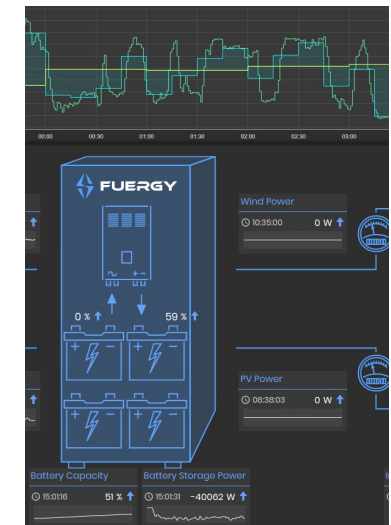

Thanks to the well-timed electricity consumption and local energy production it achieves outstanding financial savings while maximizing the utilization of renewables and relieving the burden on the power grid. Communication between FUERGY software and the managed technologies is ensured by a proprietary hardware device called FUERGY Control unit.

**Bioleaching – Bioremediation – Biostimulants****KEY FEATURES**

- ecological
- innovative
- sustainable
- value-adding

ekolive provides an industrial bioleaching process for releasing metallics, metalloids and/or non-metallics and/or degrading organics out of any suitable carrier material (wastes/minerals/soils), avoiding the need of chemicals and energy consumption in processing, using mixtures of trained effective natural microorganisms. Based on this process ekolive produces liquid natural biostimulants – for biological strengthening of ornamental and crop plants –, and solid soil conditioner – primarily serving to promote or restore the microbiome in the soil, – and thus in turn to strengthen health, resistance, and growth of plants.

Bridge monitoring system

KEY FEATURES

- Real time 24/7 structural health data
- Automated data processing and infrastructure control
- Simple to install & Maintenance free
- Reliable data from fiber optic technology

Recent catastrophic bridge failures are the most high-profile examples of a worsening problem being experienced across many countries.

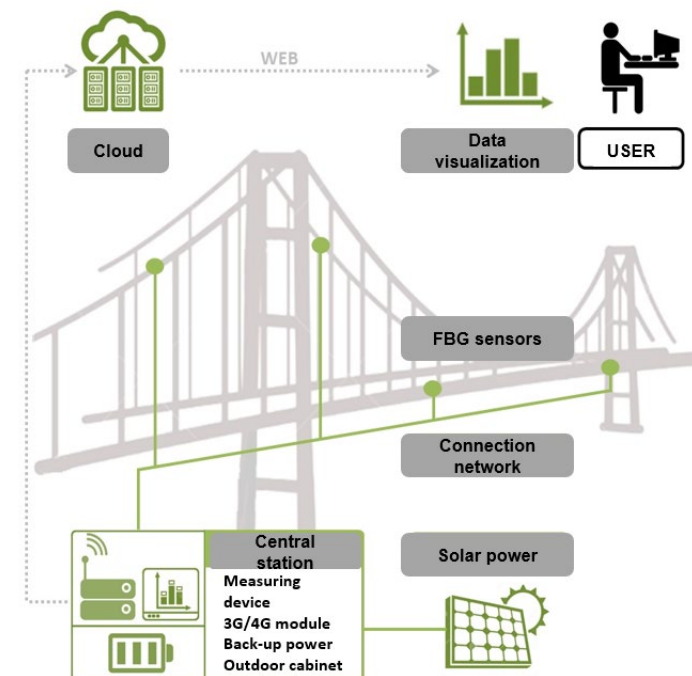

SYLEX provides bridge engineers, asset managers and public infrastructure leaders with the structural health information to better prioritize maintenance, extend the life of infrastructure assets, and serve as an early warning system for potential failures. Fiber optic sensing systems are playing a significant role within this field, due to their immunity to challenging environments, durability and the lack of requirement of local power.

Flagship product of the company - Controller LUMIMASTER

Control unit for smart lighting and EV charging solutions. It enables autonomous, local and remote management of lighting and charging. This unit works with all of the current SEAK modulation units and EV chargers. The main function:

- Autonomous control and monitoring system
- Support for integration of electric car chargers with shared power balancing (load balancing)
- 4 configurable digital inputs for the main contactor, SSR, twilight switch, door contact sensor, pulse electrometer, etc., expandable with additional inputs via Modbus
- Built-in Ethernet port and GPRS/EDGE router
- Built-in web server for configuration/diagnostics
- Built-in security features: firewall, SSL support and VPN client
- Backup battery to send an alarm status in case of power failure

KEY FEATURES

- Automation
- Customization
- Scalability
- Conformity

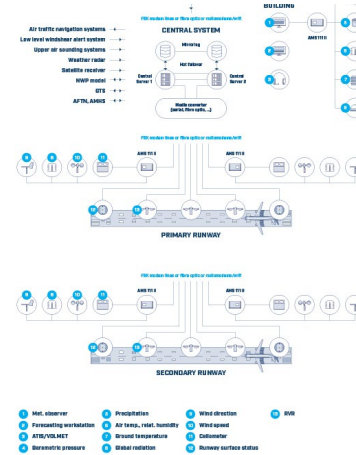

IMS4 Automated Weather Observation System is an airport weather observation system for regional, national and international airports. The IMS4 AWOS measures, processes, stores, presents and communicates all meteorological data at the airport: measurements produced by a variety of meteorological sensors, manual observations, and WMO codes received from GTS and AFTN. It provides the weather data to observers, air traffic control, pilots, and other users through real-time screens, graphs, WMO codes, alarms, and voice reports. It interfaces with upper air systems, low level windshear alert systems, and radars. All data can be processed and analyzed thanks to our IMS4 Weather Studio.

COMPANY PROFILE

ELIS is a hi-tech company providing solutions in the field of intelligent geomembrane leak detection systems. Established in 2018 by a team of leak detection professionals, ELIS offers more than 25 years of experience and elevates the leak detection industry services into the new era of automation. We developed and manufactured systems, which autonomously navigate drones, gather spatial readings of artificial electric field and mark precise GPS coordinates of any field discrepancies - leaks. This innovative technology, provides the fastest and most accurate leak detection service on the current market. ELIS helps to reduce the adverse impact of potentially toxic leaks on environment, enhances regulatory certainty and saves the time and resources of its clients. The use of our technology has positive impact on the investor/public relations of our clients, especially in the realm of ESG.

COMPANY PROFILE

VIRTUAL MEDICINE is a multi-award winning company that 6 years ago started developing a unique medical VR / AR platform - Human Anatomy VR. Just a month and 2 weeks after its release for the Samsung GearVR platform, the application was downloaded by tens of thousands people in 122 countries of the world (currently more than 180 countries of the world). Human Anatomy VR is making learning more effective, more interactive and more entertaining. It is the first and currently the only anatomical VR application on the Playstation VR, Oculus Go and Samsung GearVR platforms in the world. Oculus and Google regularly choose it among the top 3 apps in the store and put it among "featured". Our technology increased knowledge of students by more than 25% when they were tested. Thanks to our platform, 84% of students said Anatomy was much easier to learn.

COMPANY PROFILE

Reimagine data storage.

We have used the latest nano technology to convert photosensitive 35mm film into a digital futureproof preservation medium. The result is an ultra-high resolution film where the data is written as very high-density QR codes. Frames can be combined with visual previews for an additional security level. Human readable instructions on how to recover the data are stored at the beginning and end of every reel. What makes Piql different is our purpose-built technology that enables greater data security and longevity of 500+ years while significantly reducing the risk of data loss and overall costs.

CHIRANA AURA V

KEY FEATURES

- PMLV system reduces mortality of ARDS/COVID19 patients by 80%,
- APMV, AutoOpti, UVM and all standard ventilation modes

Chirana AURA V represents the highest level of ventilation system with above-standard ventilation modes for a variety of situations and for all ranges of patients. This is only one universal breathing unit which provides complete solution in basic equipment and it gives the priority to the efforts of patient to eliminate stress breathing.

The advanced respiratory system is able to automatically compensate the dead space, compliance and resistance of breathing circuit. In-built artificial intelligence provides many automatic options including optimization of ventilation parameters based on on-line monitoring of breathing system mechanics what is resulted in better synchronization with patient and significant reducing of recovery time, elimination of potential complications and shorter weaning periods. The programmed multi-level ventilation mode using variable volume, variable pressure and variable time is unique method for ventilation of hardly damaged lungs from the pathology leading to inhomogeneous gas distribution (viral pneumonia, ALI, ARDS, contusion, etc.). The numerous features and functions are predetermined to deliver personalized, non-traumatic artificial ventilation adapted to the patient needs.

Novesta/VULKAN PARTIZÁNSKE a. s.

COMPANY PROFILE

NOVESTA is one of the last European brands produced purely in Europe. Its journey began when Jan Antonin Bata opened a factory in 1939 in Partizanske. Since then NOVESTA is one of the few world's brands left, operating in the original premise with the original method on the good old reliable machines with great amount of precise manual work.

NOVESTA's heritage products are designed with longevity in mind. The traditional production method combined with simple design ensure the prolonged lifetime of its models. NOVESTA's products are sustainable - its materials are transparent, fair and sustainable along the supply chain, including VFCS certified natural rubber, and GOTS organic cotton from verified suppliers only.

In 2017 NOVESTA KIDS collection was launched with sneakers and rain boots for children handcrafted to the highest standards.

IoT multipurpose sensor

KEY FEATURES

- smallest passive wireless sensor

Glass-coated microwires are composite materials that consist of a metallic nucleus covered by glass shielding. They are prepared by drawing and rapid quenching of molten alloys and glass. They have unique properties in terms of the magnetization process as well as in terms of the mechanical properties. This makes them suitable elements for sensing various physical quantities in engineering applications.

Magnetic properties are mainly given by magnetoelastic interaction of magnetic moments with a distribution of mechanical stresses induced during production. Axial mechanical stresses arise as a result of drawing and rapid quenching of the wire. Radial and circular stresses arise from different thermal expansion coefficients of glass coating and metallic core. In addition, shape anisotropy is given by physical dimensions (diameter of the wire 1–40 μm , length of the wire 1–4 cm).

SQUAT HERO SCRUNCH BUTT LEGGINGS

KEY FEATURES

- functional
- scrunch butt
- silicone waistband

A classic piece for a classic hero. These mid-waist leggings are our all-time favourite classic cut to help you focus only on your goals and nothing else. Experience absolute freedom and maximum confidence in every movement.

We are all different. It's the passion for fitness that unites us.

Classic minimalist design and performance-oriented properties. These leggings will shape your curves thanks to the mid-waisted fit and functional smart stitching. There is a NEBBIA waistband with little silicone "Ns" that will make the leggings stay in their place without any rolling or discomfort. Enjoy absolute confidence - you deserve it!

NEBBIA™ 

DB Biotech

COMPANY PROFILE

DB Biotech is European producer of antibodies (with own proprietary technology), which are used primarily for early cancer diagnostics. Antibodies are used in hospitals and diagnostics centers, and are applied on biopsy tissue samples (immunohistochemistry application). On top of that, antibodies can be used in research field as well.

Our biggest customers are located in France, UK, Spain, Turkey, Slovakia, Czech republic, Greece, we also export our products overseas, to US, Canada, Mexico, Africa (mainly Nigeria), Japan and China too.

Biomedical Engineering

CAGE - PATIENT SPECIFIC REPLACEMENT OF INTERVERTEBRAL DISC

COMPANY PROFILE

Biomedical Engineering was established back in 2010 by researcher and developer, Dr. Radovan Hudák and Prof. Jozef Živčák, due to an identified need for higher levels of customization within the medical implant device market. The company was one of the very first to introduce the usage of 3D printing for medical implantation purposes, achieving an unprecedented level of implant design customization. Today, the company's team boasts ten biomedical engineers and designers, all working together to expand the company's offerings through innovations and reach medical hospitals worldwide.

KEY FEATURES

- Biomimetic
- Personalised
- Fracture Resistant
- Porous

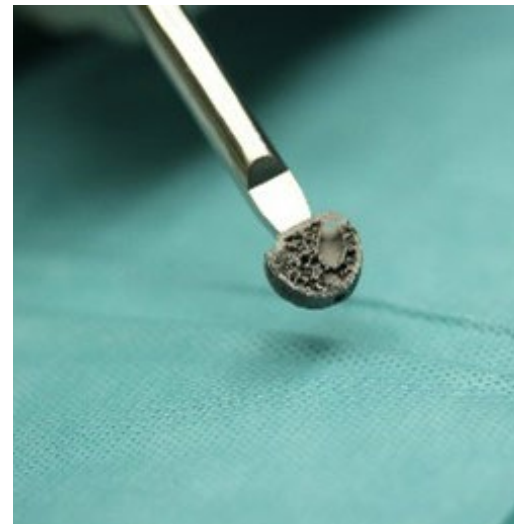

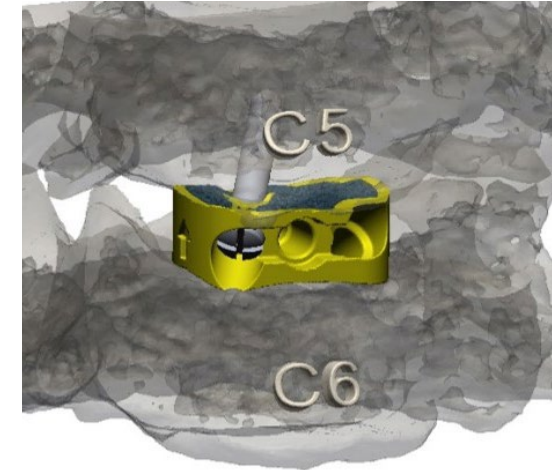

After herniation of the intervertebral disc or other degenerative diseases of the Spine, the so-called cage is indicated. Intervertebral cage – a "Cage" that fills the gap between the bodies of the vertebrae which are created after the removal of the Defective disc. Biomedical engineering was the first in the world to come up with the Concept of personalized disc replacements. These replacements copy the anatomical Proportions of the adjacent vertebra and therefore prevent the movement of the Implant in any direction. The own design of the porous structure influences the early Integration of bone tissue and rapid healing after surgery.
