

## SARIO Diversification Services

**Dates:** 27 Jan - 31 December 2021

Sectoral Diversification as a Way to Technological Growth of Slovak Companies

Diversification Services represent a new activity of the SARIO agency aimed to support the sector portfolio diversification of Slovak companies towards promising high-tech areas with significant growth potential - space, aerospace, medical technology, innovative and green mobility.

All of these sectors are technologically cross-cutting, enabling companies to focus on a wide range of domains - from mechatronic satellite components and applications using satellite data on Earth, through aircraft components and innovative communication systems, to medical electronics and diagnostic software using artificial intelligence.

At the same time, these are sectors for which many Slovak companies have excellent technological preconditions.
