

Innovation sourcing SARIO

The main goal of innovation sourcing is to connect local technology companies, operating mainly in the Industry 4.0 sector with the operations of production or logistics companies that plan to implement new innovative solutions in order to streamline and optimize their processes.

The main tool of innovation sourcing are **tailor-made innovation seminars and workshops** (including virtual ones), which focus on the presentation of companies and their technological solutions, and also serve as a business and presentation platform for local providers of these solutions.

The most frequent topics and areas in which companies seek innovative solutions for their operations include digitization, intelligent automation, and robotics of production or logistics, single-purpose machines, and equipment, predictive maintenance, quality control, built-in sensors, virtual and augmented reality, or complex IT solutions in areas of cyber security, digital twins, big data, artificial intelligence or cloud technologies.

SARIO has a **database of more than 300 local technology companies** that provide innovative solutions in the above-mentioned areas. This database is constantly updated and expanded.

If you are interested in innovation sourcing either as a potential client or a provider of innovative solutions, especially in the field of Industry 4.0, do not hesitate to contact us.

Marek Kopanický, consultant & innovation sourcing lead, Investment Projects Department, SARIO
E-mail: marek.kopanicky@sario.sk [1]

SARIO has been recording the following results since 2017 (as of 30 September 2021):

- **30 organized innovation workshops/events**
- **433 individual opportunities for local technology companies**
- **171 presentation opportunities for local technology companies**
- **69 successful follow-up meetings**
- **32 requests for quotation**
- **15 implemented innovation projects (at least in the pilot phase)**
