

ELP ENERGY
GREEN TECHNOLOGY

Trapped gentlemen (Ms)

I come through this letter to present a business plan that part of the private initiative represented by the Brazilian company, ELP Sistemas de Tecnologias Self-sustainably, focused on GREEN TECHNOLOGIES, in this process we seek partners abroad of multinational private equity companies with an interest in industrialization of new technologies in Brazil.

We are open to investment proposals from our colleagues from abroad for our innovative project called, Industrial Cluster of green technology industries that we have come to present as a business option in Brazil.

We are making the request for the assistance and DEVELOPMENT of our project, where we request support from business partners of the International Chamber of Commerce where the organization make up business members of private companies from other countries, who are seeking the opportunity for new investments for the development of new projects in Brazil.

We have prepared some business options and projects to be developed in the area of sustainability. We have an area of 100,000m² in Paraná where the possibility of installation of some industries, and favorable business conditions for partners who have an interest in industrial investment.

Business option we have to offer;

- 1st -Photovoltaic power plant of 5 Megawatt power generation.
- 2nd -Tire recycling plant.
- 3rd -Metal recycling plant.
- 4th -Electric Vehicle Assembler.
- 5th -Electric Motorcycle Assembler.
- 6th -Manufactures of Solar Modules.

Our cause has been social of GREEN growth, where the main objective is the implementation of green technologies.

ELP ENERGY
GREEN TECHNOLOGY

Through publicly opened information and reports, we see several major problems because of Brazilian bureaucracy and the difficulty of getting funds from the investment fund of the financial system for ecological projects in Brazil. Seeing this scary has no choice but to seek from our friends private equity entrepreneurs for private fund withdrawals for this operation, together with the international bodies of foreign trade cameras and international investment funds, to bring the message to our investors.

Our project area is well located, with an excellent topography for the implementation of an industrial park, having space for several companies, located 1,800 meters from BR 277, 55 km from Paraguay, 80 km from Cascavel International Airport and 15 km from Medianeira-PR city center. Each lot equivalent to 20,000m² was valued at R\$ 14,250,000.00 totaling R\$ 71,250,000.00 that will be part of our investment.

We look forward to the return for collaboration of our friends in this great ecologically correct project, which will begin in Brazil with possible expansion to other countries. We are willing to develop the same project model in other territories, for economic development in all countries where our partners are part.

Ericson Piccoli
Chief Executive Officer
