

REFERENCES 2002—2024

Since 2002, the Slovak Investment and Trade Development Agency has successfully supported the implementation of many strategic investment projects in Slovakia — among them, we should mention the factory for the production of batteries for electric vehicles of the company GIB EnergyX, whose production plant will be located in Šurany. Also, the location of the production plant of the premium car brand Volvo Cars in Valaliky near Košice, the operation of Jaguar Land Rover in Nitra in 2015, the PSA Peugeot plant Citroën in Trnava (currently Stellantis) in 2003, Kia Motors Žilina (currently KIA) in 2004, as well as the expansion of the Bratislava plant of Volkswagen Slovakia in 2008 and 2020.

Of the successfully reported projects in 2024, 25% have the potential for creating higher added value.

Other projects implemented with the help of SARIO were the investment of the premium brand Porsche in Horná Streda, the investment of the American group Garrett Motion in Prešov, the construction of the plant of the Japanese company MinebeaMitsumi in Košice, the investment of the Dutch company BDR Thermea in Vranov nad Topľou, the investment of the German company Winkelmann in Rimavská Sobota, investment by the Chinese company Xinquan in Prešov, also Vaillant's investment in Senica. In addition to industrial production, in 2017 SARIO also supported the establishment of a new reverse logistics center of the American company Amazon in the city of Sered'. SARIO agency also helped with several new projects or expansions of many shared service centers (SSC), for example

the client center of Amazon, which opened its first Slovak representative office in Bratislava in 2011, and the SARIO agency was also involved in the establishment of the global business center of the American company Dell, the expansion of IT of the T—Systems center in Košice as well as in the expansion of IBM and AT&T IT service supply centers. In the field of technology center projects, the SARIO agency supported and assisted in the establishment of the technology center of the premium brand Porsche, as well as in the development of the new center of the American integrated circuit manufacturer ON Semiconductor. The successful MinebeaMitsumi investment project in Košice also includes a research and development division focused on the development of mechatronic propulsion

systems and employs 100 people. The new technology centers of leading suppliers to the automotive industry, Schaeffler in Kysucký Nový Mesto, ZF in Trnava and even Porsche in Horná Streda, are focused on the development of alternative drives and electromobility.
